

ROTARY

Fúrési Zrt. ■ Drilling Co. Ltd.
Member of the Group

To Whom It May Concern,

Daniel Gabor Szekely was employed by Rotary Drilling Zrt. as a Service Engineer between August 2013 and April 2014. He was entrusted with the role of Safety Advisor at the Lyb-42 Drilling Rig, in 12 hour shifts 7 day turns.

His role consisted of:

- Supervising daily work and processes
- Enforcing safety regulations
- Working out HSE training materials and hold on-site trainings for staff
- Checking and administrating tools and certificates
- Data recording for the Drilling Supervisor

I would also like to emphasise the great job Daniel did co-operating with own and foreign service company employees. He had to use his English knowledge as a daily routine, helping the smooth communications with the different parties.

According to the reports of his direct superiors, Daniel is a versatile and precise junior engineer. His constant willingness to develop himself proves his motivation and determination about his profession. He always provided a helping hand to his co-workers who fulfilled manual roles in order to extend his professional knowledge and experience. He proved to be a great team-player who is a pleasure to work with. We found his approach, attitude and work to be of the highest standard and would not hesitate to recommend him highly.
