

Letter of Reference

Gábor Székely Dániel started his alternating weekly shift work of 12 hours per day at our Lyb-42 drilling rig in September 2013.

Initially, he was a physical worker who was fast to learn the required working speed. His diligence made him a useful team member. It was great to see a fresh university graduate taking a humble and appreciative approach towards other site workers, which is why he was quickly accepted by the community.

Three months later he was appointed as Safety Advisor for the drilling rig. He showed commitment and responsibility in his new role.

His tasks included:

- compliance with safety regulations;
- supervision of hazardous work phases;
- coordination of foreign employees;
- administration of well-related data.

Following his appointment, he continued to regularly perform physical work with his colleagues although it was not part of his new job description. Furthermore, during his stay at our company, he kept on asking about the technological processes carried out at the rig.

In my opinion, Dániel is a motivated, diligent and committed young engineer who proved his ability to work in a responsible position.
